

Datamatics

04 March 2025 14:43

1. Introduction
2. Editable Subgrid
3. Version which you are using of D365
4. Difference between XrmWebApi and XmlHttpRequest
5. How to call plugin in JavaScript
6. How to add canvas app in sitemap

1. Introduction
2. Implementation of Canvas App in your project
3. What are SLA and Routing Rules
4. Use case scenario of SLAs (Implemented in the project)
5. End-to-end process of adding entity (custom as well as system) to a model driven app
6. Forms, Views and BPFs in detail
7. Business Rules - scope and action list present
8. Event handlers in JavaScript
9. Execution order of Business Rules and JavaScript (which will execute first and why)
10. Trigger points in Workflows and actions in them
11. Triggers and actions in Power Automate Flow
12. Send email - approaches
13. Automated BPFs (on field change)
14. Event pipeline stages of Plugins
15. All the three modules - Sales, Customer Service and Marketing Module (Use case scenario used in the project and what entities have you used in them)
16. Design web page using Power Pages and display the list and form of any entity
17. How to add custom code in Power Pages site
18. Lifecycle of Agile and Azure DevOps
19. Steps for Deployment
20. How will the changes in the higher environment (prod) reflect in the lower environment (dev)
21. How you have performed the testing
22. Did you have another team for testing
23. Have you created the metadata? Did you have the permission to do so?
24. Have you worked on Azure and its integrations
25. Scenario of plugin of the pipeline stages (pre-validation, pre-operation and post operation)
26. Preference of Plugin over Power Automate Flow (Based on a scenario)
27. Steps to register a Plugin and which tool have you used
28. How debugging is done in Plugins

04 March 2025 14:45

1. Introduction
2. How the migration of data have you done in your project?
3. How did you handle the data redundancy while migrating the data?
4. How cleansing of data have you done and how did you handle duplication of data?
5. Alternate keys. Steps to create one.
6. How can you change a particular field's data, for example, 'created on' during data migration, as these fields are typically read-only and managed by the system?
7. Any third party-integrations done and how?
8. What happens in the background when a lead is qualified?
9. Restrict the creation of duplicate account and contact - most feasible approach (if used plugin - on what message and at which stage)
10. Record ownership of entity
11. Access team and how do we use them? Also what are the access rights present?
12. Field level security and its implementation
13. Solution actions while importing managed solution and difference between them
14. If changes are done in production environment of a managed solution, how will you handle that?
15. If I have to change the data type of a field of any entity in production environment, how will you do that?
16. In JavaScript, what is context and its methods to interact with the form?
17. How to get the data of the current user from the context using JavaScript?
18. How to call plugin from JavaScript?
19. Actions in D365 CRM
20. Differentiate between plugins and custom workflows
21. Early and late binding
22. Knowledge in azure and its integration
23. Worked with console app
24. Worked with canvas app and power portals
25. What is PCF?
26. Worked with Power BI

04 March 2025 14:46

1. Introduction
2. Recent project in detail
3. How have you done data migration
4. While migrating the data, if suppose one field is not mapped how will you handle that scenario?
5. After the deployment, you found out that your solution isn't working, but it was previously working in the development environment. What will you do in that case?
6. If in the production environment, you found an issue which will take 2 days to resolve which is on critical priority, but due to business requirement it should be resolved immediately. What would you do in that particular scenario?
7. If a variable is showing as undefined when using JavaScript, what must be the most possible error?
8. What are global variables?
9. How you used SQL?
10. How have you used the null fields in any entity while using JavaScript
11. Implementation of any Agile methodology in your project. What was the size of the sprint.
12. Deployment steps
13. Team size (included Scrum Master and PO)
14. What do you look for during the testing of the solution.
15. How the peer reviews were done
16. When you join the standup calls, how do you verify your work in peer reviews
17. Have you prepared any documentation?
18. Architecture and design -> have you worked on these?
19. Proficiency in which technology in MS D365 CRM.

23 April 2025 11:57

1. Introduction
2. Which version of dynamics have you used
3. Used online or on-premise? Difference between both.
4. Difference between pre validation and pre operation with their use cases.
5. Sales life cycle
6. How changes are handled in managed solution in higher environments
7. Difference between solution actions
8. Relationship behaviour
9. Access level of security roles
10. Scenario - 1 BU has many users. For particular users, restrict their privileges.
11. Power automate - what actions and triggers have you used?
12. What dynamic expressions have you used in power automate
13. Power Fx formulas
14. System job monitoring
15. What are fallback forms
16. Maximum no. of tabs that can be added to a form
17. Plugin execution time
18. Concept of depth and how have you used them?
19. Secure and unsecure configuration
20. Methods used to create and update records using javascript (syntax)
21. Aysnc and sync difference
22. How have you used async and await
23. Promises
24. AzureDevops - pipelines?
25. Canvas app implementation - Power fx formulas used there
26. Upsert
27. Managed and unmanaged layer
28. Set lookup value using javascript
29. Integrations - worked on that using custom code?
30. Rate yourself on plugins and javascript
31. How have you used images in plugins
32. Impersonation in PRT
33. Debugging of plugins, custom workflow and javascript
34. Query expression and fetch xml difference
35. Paging in plugins
36. Current company you are working?
37. Done the deployment?

CRM Modules and Components : Entity, Forms, Workflows and relations explain ?

Have you done Integration : explain in details with methods (API etc)?

Plugins write code and check if name field contains only 5 character init if yes then create record else prevent it from saving ? throw error

Power Automate flows : Actions, Steps , Connectors, Proper steps and how you create with eg ?

write Workflow in details : with creation to steps, condition, trigger points and events with eg ?

Scenario if you have a project deadlines in project have to deploy your project within deadlines with best practices, task and best code practices ?

JS - set visibility based on optionset ?

- 1.can one user be a part of different business units.
- 2.explain security model in detail.
- 3.difference between assign and share privilege.
- 4.difference between append and append-to privilege.
- 5.what is field level security, how to achieve it.
- 6.explain different access level in security roles.
- 7.explain the execution pipeline of plugin.
- 8.difference between pre-validation & pre-operation.
- 9.what is depth in plugin, when do we use it.
- 10.why do we need to create a key while we are creating a plugin.
- 11.can we pass multiple parameters in JavaScript, if yes then how.
- 12.in how many ways can we debug the plugin & JavaScript.
- 13.how to fetch multiple records using plugin and JavaScript.
- 14.difference between enable and display rules in ribbon workbench.
- 15.if I want to get the option set field text value how will I get.
- 16.how do I set the lookup field value using JavaScript.
- 17.how do you call a child flow using parent flow in power automate.
- 18.there are how many data verse actions present in power automate.
- 19.when we initialise a variable in power automate there are how many types.
- 20.how many records we can retrieve using plugin.
- 21.what is pagination.
- 22.what is difference between managed and unmanaged solution.
- 23.what happens when you uninstall a managed solution and unmanaged solution.
- 24.what is versioning in solution.
- 25 what is revise and rebuild a solution.

Miscellaneous

06 June 2025 19:22

1. Could you share your complete journey, starting from your education to where you are now professionally?
2. How many companies have you worked for so far?
3. What were the reasons for leaving your previous company, and what motivated you to join this company?
4. Why are you applying for this specific job role?
5. From what date will you be available to start?
6. Can you describe a typical day in your life and explain the tasks you usually handle?
7. What are your current working hours?
8. Since our working hours differ, will you be able to adapt to these timings?
9. What is your manager's name?
10. What is your designation in your current company, and what was it in your previous company?

Please request the bench resources to prepare the following information:

1. Number of projects completed to date
2. Total number of plugins written
3. Total number of Power Automate flows created
4. Total number of JavaScript scripts written
5. Total number of custom workflows developed
6. Total number of workflows created
7. Total number of integrations completed

For each project listed on their resume, please provide:

- Project domain (e.g., Healthcare, Entertainment, Automobile, etc.)
- Team size
- Your role
- Project duration (in months)
- Modules worked on (e.g., Sales, Customer Service, etc.)
- Total number of plugins written
- Total number of Power Automate flows created
- Total number of JavaScript scripts written
- Total number of custom workflows developed
- Total number of workflows created
- Any integrations done (if yes, please specify)
