The diagram illustrates the flow of record ownership and the user interface for modifying a record. It is divided into two main sections: a flow diagram on the left and a user interface screenshot on the right.

Flow Diagram (Left):

- Flow Owner:** The user who created the flow.
- Row owner:** The user who owns the record.
- Modifying user:** The user that updated the record.

User Interface Screenshot (Right):

The screenshot shows the 'Modify record' form in the 'Data Explorer' tool. The form is divided into two main sections: 'Record information' and 'Record details'.

- Record information:** This section contains fields for 'Name', 'Type', 'Status', 'Created by', 'Created on', 'Last modified by', and 'Last modified on'. The 'Created by' field is highlighted with a red box and labeled 'Modifying user'.
- Record details:** This section contains a 'Data' table with columns for 'Name', 'Type', 'Status', 'Created by', 'Created on', 'Last modified by', and 'Last modified on'. The 'Last modified by' field is highlighted with a red box and labeled 'Use invoker's connection'.

The flow diagram on the left shows a sequence of steps: 'Other' (Enter another option), 'Comments' (Please enter your input), 'Notify owner' (Please select yes or no), and 'Email' (Please enter an e-mail address). A yellow arrow points from the 'Comments' step to the 'Modifying user' field in the screenshot.

The screenshot shows the 'Add new action' dialog in Microsoft Power Automate. On the left, there is a list of actions categorized by icons: 'Age' (person icon), 'Notification date' (calendar icon), and 'Add attachment' (paperclip icon). The 'Add attachment' action is highlighted. On the right, the configuration panel for the 'Add attachment' action is shown. It includes sections for 'Custom Tracking ID', 'Security Inputs', 'Security Outputs', 'Retry Policy', 'Concurrency Control', and 'Trigger Conditions'. The 'Add' button is highlighted with a red circle.

-
- Available input types:
- **Text** – Text can be converted into a “drop-down list of options” or a “multi-select list of options”
 - **Yes/No**
 - **File**
 - **Email** – To be able to select a user within your organization.
 - **Number** – Integer and Decimal numbers will work.
 - **Date** – Date only field.

Add a new row

Partition Id: An option to specify the partitionId while retrieving data for NoSQL tables

List rows

- * Table name: Contacts
- Select columns: firstname.lastname
- Filter rows: firstname eq 'Dani'
- Sort By: Enter an OData style orderBy query to sort the rows
- Expand Query: parentcustomerid_account(\$select=websiteurl)
- Fetch Xml Query:

```
<fetch count='10'>
  <entity name='contact'>
    <attribute name='name' />
    <attribute name='preferredcontactmethodcode' />
    <attribute name='emailaddress1' />
    <attribute name='telephone1' />
  </filter>
  <condition attribute='createdon' operator='ge' value='2021-01-01T00:00:00-00:00' />
</filter>
  <order attribute='name' descending='true' />
</entity>
</fetch>
```

Row count	Enter the number of rows to be listed (default = 5000)
Skip token	Enter the skip token obtained from a previous request to get rows from the next page
Partition ID	An option to specify the partitionId while retrieving data for NoSQL tables

12	Data Type	Sample	Comments
	Text	New contact created	
	Whole Number	25	
	Date	2022-01-15T00:00:00Z	For Date only field, you still need to set the time to 00:00:00Z
	Date Time	2022-01-15T10:30:00Z	Date time in UTC Time
	Choice	Select an option or 509180000	Select an option from the provided list in Power Automate OR use the choice value (Ex: 509180000)
	Choice (table)	triggerOutputs()?['body/_educationcd_e_label']	
	Choices	Select an option or 509180000,509180001,509180006	You can only choose 1 option from the provided list in Power Automate. For multiselect, you can set the choice values separated by a comma. (Ex: 509180000,509180001,509180006)
	Currency	1000	
	Customer (value)	Contacts(00f291c1-7479-ec11-8d21-000d3a554ca0)	Use the EntitySetName followed by the record GUID enclosed in parentheses.
	Decimal Number	12.30	
	File	Not available	Use the Upload a file or an image action instead
	Floating Point Number	12.30	
	Image	base64[...]	Convert any file to base64
	Lookup	Contacts(00f291c1-7479-ec11-8d21-000d3a554ca0)	Use the EntitySetName followed by the record GUID enclosed in parentheses.
	Multiple Text	This is a long text -> this is a long text -><=	If using the rich text editor , you can insert your text in HTML format.
	Yes/No	Select an option or true	Select an option to use the True or False expression in Power Automate

3 Get the entitysetname

References:

[How to get entitysetname while setting lookup value in Power Automate - by Debjoti Dutta](#)

- 14 Row's globally unique identifier (GUID)
Ex: 1f1e3248-8ba5-ec11-983f-0022483143a7 or  Contact x
- 15 Select the **file** or **image** column name

16 Find the **associatednavigationproperty** value for lookup. You can use "Level up for Dynamics 365/Power Apps".

17 Use the [FetchXML Builder](#) to create the Fetch XML Query.

18	
Parameter Name	Description
Row count	Use to indicate the specific number of rows for Dataverse to return. Here's an example that shows how to request 10 rows.
Skip token	Use to handle paging manually with the Skip Token parameter.
Partition ID	An option to specify the partitioned while retrieving data for NoSQL tables. To learn more, see Improve performance using storage partitions when accessing table data.

Update a row

Table name	Row ID	Description	Due Date	Duration
Tasks	00f291c1-7479-4d21-000d3a554ca0	Type additional information to describe the task.	Enter the expected start and end date and time.	Type the number of minutes spent on the task. The duration is used in reporting.

The screenshot shows the 'Table Editor' interface with a green header bar containing the text 'Upload a file or an image' and a question mark icon. Below the header, there are four rows of input fields, each with a label on the left and a text input on the right. The rows are:

- 'Table name' with the value 'Tasks' and a blue circular icon with the number '2' next to it.
- 'Row ID' with a green square icon containing a white 'x' and the text 'Task x', and a blue circular icon with the number '14' next to it.
- 'Column name' with the value 'PA Image' and a blue circular icon with the number '22' next to it.
- 'Content' with a blue square icon containing a white 'x' and the text 'Body x', and a blue circular icon with the number '22' next to it.
- 'Content name' with the value 'Untitled'.

 A yellow bracket is drawn on the right side of the 'Content' and 'Content name' rows, indicating a relationship or grouping between them.

19 Bound actions target a single table or a set of rows from a single table

20 Unbound actions aren't bound to a table and are called as static operations. Unbound actions are performed on the entire environment, not on specific tables or rows.

Parameter name	Sample
Relationship	Choose the relationship from the available options
Relate with	Use the format: https://environment.crm.dynamics.com/api/data/v9.1/{tablename}/{GUID} Ex: https://environmentname.crm.dynamics.com/api/data/v9.1/tasks/1d215776-2c2f-e1-b6e5-000d3a8a9a8f

22	Parameter name	Sample
	Column name	Choose the column with the file of the image
	Content	Specify the file or image content on binary or base64 format
	Content name	Specify the name and file extension for the file otherwise it will appear as 'Untitled' on your form.

24 Use the Search rows action in flows to retrieve data from Microsoft Dataverse by using keywords and Dataverse search, which delivers fast, intelligent, and comprehensive results across tables in Dataverse.

References:
[Use Dataverse search to retrieve rows](#)

- 1 Initialize a new variable and set it **Null**
- 2 Check if the **lookup** is not **Null**
- 3 Set the variable with the lookup value
Ex: `accounts[Company Name...]`
- 4 Set the variable to populate the column

The screenshot illustrates a Microsoft Dynamics 365 Flow Designer workflow for adding a new row to a table. The flow begins with a trigger 'When a row is added, modified or deleted'. This is followed by a 'Parent Account' lookup step (1), which sets the 'Parent Account' variable to 'String' and 'null'. A condition step (2) checks if 'Parent Account' is not null. If the condition is 'yes', the flow proceeds to a 'Set variable' step (3) where the 'Company Name' variable is set to 'accounts.' followed by the 'Company Name' variable. The flow then branches into 'if yes' and 'if no' paths. The 'if yes' path leads to an 'Add a new row' step (4) where the 'Task with Parent Account' is selected, and the 'Parent Account' variable is used for the 'Company Name' field. The 'if no' path leads to an 'Add an action' step.
